DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to power control responsive to error-detection-code encoded words "repeated at a desired power control rate", classified in class 714, subclass 798.
 - II. Claims 9-16, drawn to power control responsive to the strength of an error-detection-code encoded control signal, classified in class 714, subclass 798.
 - III. Claims 17-28, drawn to power control responsive to a change in a data transmission rate, wherein control information is error-detection-code encoded, classified in class 714, subclass 807.
 - IV. Claims 47-63, drawn to power control using error-detection-code encoded words repeated with a slot timing corresponding to a desired power control rate, classified in class 714, subclass 798.

- V. Claims 29-46 and 64-71, drawn to power control responsive to repeated codewords encoded with first and second encodings, classified in class 714, subclass 798.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombinations I-IV have separate utility such as in arrangements where the encoding is a simple error-detection code encoding. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Baker whose telephone number is (571) 272-3814. The examiner can normally be reached on Monday-Friday (11:00 AM - 7:30 PM).
